WHAT IS EPOXY FLAKE COATING?

@LT_MultiCoating

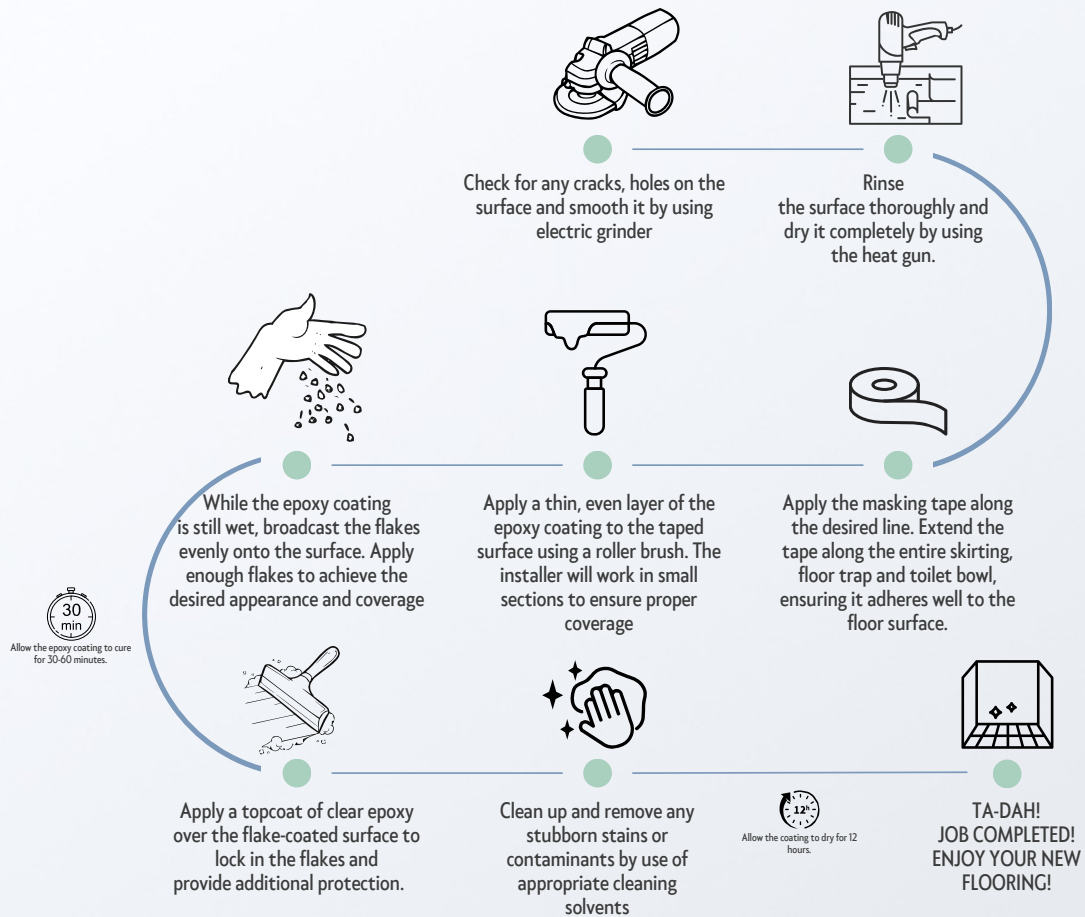

Epoxy flake coating is a type of flooring system that consists of a base layer of epoxy resin, a middle layer of colored flakes or chips, and a top coating of clear epoxy for added durability and protection.

This type of coating is known for its durability, resistance to wear and tear, chemical resistance, and aesthetic versatility. Epoxy flake coatings are often used in toilets, commercial kitchens, locker rooms and other places where durability and visual appeal are important.

LT MULTI COATING

INSTALLATION PROCEDURE

EPOXY FLAKE COATING SYSTEM

PROS AND CONS

EPOXY FLAKE COATING

WATERPROOF

The waterproofing function of epoxy flake coating is due to the fact that the epoxy resin forms a hard, waterproof barrier on the surface of the material. The flakes of metal, glass, or other materials help to reinforce the coating and make it more durable.

4~6 HOURS CAN COMPLETE

The process of applying epoxy flake coating is quicker than many other flooring alternatives. It can often be completed within 4-6 hours, depending on the size of the area.

ANTI-SLIP

Epoxy flake coatings can be customized to offer varying levels of slip resistance, making them a suitable choice for areas that require good traction, such as toilet, kitchen or balcony area. Different textured additives can be incorporated into the epoxy for enhanced slip resistance.

COST-EFFECTIVE

Epoxy flake coatings offer a cost-effective flooring solution. They have a relatively low installation cost compared to other flooring options like hardwood or tile, and their durability and low maintenance requirements contribute to long-term cost savings.

NO HACKING NEEDED

Epoxy flake coating indeed does not require any hacking or the removal of the existing floor surface. It's actually one of the benefits of opting for an epoxy flake coating. It can be applied directly onto your existing floor (concrete, for instance).

3 YEARS WARRANTY

We provide warranty for a period of thirty-six (36) months according to the invoice reference number. This warranty covers the repair or replacement of the supplied surface for coating PEELS OFF, FLOOR WATERPROOFING and the COLOUR FADES

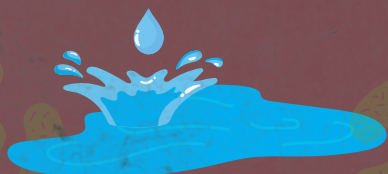

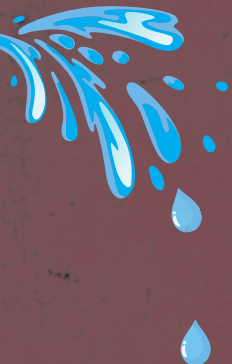

CONS

NOT SELF-LEVELING

Epoxy flake coating isn't naturally self-leveling. That means if there are irregularities in the floor to start with, they can show up through the coating. In order to have a level floor, one might need to use a self-leveling epoxy or a cementitious self-leveler before the flake system if the existing floor has substantial dips and rises.

WATER PONDING OR POLLING ISSUES.

Just as mentioned earlier, epoxy is not naturally self-leveling. If the existing floor has imperfections such as dips or rises, they will reflect through the coating, leading to uneven surfaces where water can accumulate.

@CHARCOAL_BLACK

E201

Charcoal black, as the name implies, is a deep, dark shade of black. This color can be likened to the color of charcoal, which is a rich, dark black with the slightest hint of gray. Charcoal black is often considered a strong, sophisticated, and elegant color.

@IRON_GREY

E202

Iron grey is a deep, strong color that sits between grey and black. It's named after the color of processed iron and replicates its metallic, lustrous quality. In flooring, as in the case of epoxy flake coatings, iron grey can be used to create a sleek, modern, and industrial feel. As it's a darker shade, this color may not show up dust and marks as readily as lighter shades and is easy to maintain.

@STEEL_GREY

E203

Steel grey is a medium-tone shade of grey that resembles the color of polished steel. It's a cooler, metallic hue that falls within the spectrum of grey but often looks slightly bluish due to the metallic characteristic of steel. It pairs well with a variety of colors and can be used with lighter shades to create a calming, modern aesthetic. Paired with brighter or vibrant colors, steel grey can serve as a balancing, neutral backdrop.

@CREAM_WHITE

E204

Cream white, often simply referred to as cream, is a soft, warm variation of the color white. It has a slight yellow or ivory tint, which gives it its warmth compared to pure white or off-white shades, mimicking the color of fresh cream. In terms of epoxy flake coatings, a cream white base can contribute to a light and spacious feel. It can also help to brighten up a space by reflecting more light. Always remember to check samples of the color under the lighting conditions of the space you intend to use it in, as different lighting can significantly affect the appearance of color.

@EGYPTIAN_BLUE

E205

Egyptian blue, as the name suggests, has its roots in ancient Egyptian art and architecture and is one of the first synthetic colors ever produced. This striking color has a rich, vibrant, and deep blue tone, often with subtle hints of purple. In the context of an epoxy flake coating, Egyptian blue would certainly create a striking and vibrant floor. Its dark tone might also prove practical for hiding dirt well.

@SAPPHIRE_BLUE

E206

Sapphire blue, is a bright, deep, and vivid shade of blue that resembles the color of a sapphire gemstone. A sapphire blue coating would create a radiant and visually striking floor. Furthermore, its deep tone can help hide dirt and scuffs, making maintenance easier. However, given its intensity, consider the size and lighting of the space it will be used in to ensure it doesn't overwhelm the area.

@CAROLINA_BLUE

E207

Carolina blue, also known as Tarheel blue, is a light, gentle shade of blue with a slightly silver undertone. It's most famously associated with the University of North Carolina at Chapel Hill's athletic teams. Carolina blue could lend a cool, clean, and calming aura to a space. Lighter colors like this can help to brighten up a room by reflecting light, thereby making a room seem more spacious.

@PIGEON_BLUE

E208

Pigeon blue, is a medium, purplish-grey color that is often associated with the color of a pigeon's feathers. It embodies a gentle mix of grey-blue shades, presenting a soft, calming, and sophisticated hue. A pigeon blue coating could create a neutral yet visually appealing floor. Given its medium hue, it's likely to hide dirt and wear fairly well, offering a good balance between aesthetic appeal and practicality.

@PRUSSIAN_BLUE

E209

Prussian blue is a deep, rich, and dark blue hue known for its intensity. This color was first synthesized in Berlin in the early 18th century and is among the first synthetic pigments. It has a slight undertone of green, which gives it a cool, somewhat teal-ish appearance. Prussian blue could certainly offer a striking and moodily elegant shade for a floor. Its dark color can also be practical for hiding wear and dirt.

@TRUKISHGREEN_GREYISH

E210

Turkish green with greyish is a unique and nuanced shade that combines elements of both green and grey. It typically has a muted, understated quality that sets it apart from more vibrant or traditional greens. This color can create a serene and peaceful ambiance. It pairs well with other neutral shades. It can also work beautifully with muted earth tones or complementary colors like dusty rose or mustard for a slightly more eclectic look.

SWIPE UP

@MUSTURD_YELLOW

E211

Mustard yellow is a warm, rich, and earthy shade of yellow that resembles the color of mustard seeds or the condiment itself. It has a distinct golden-brown undertone, giving it a more mature and subdued appearance compared to brighter or lighter shades of yellow. In design, mustard yellow can add depth and character to a space. It pairs well with various colors and works particularly well with neutrals like white, grey, or beige, creating a striking contrast. It can also be combined with other warm colors like burnt orange or rustic brown for a harmonious and earthy palette.

@SACRAMENTO_GREEN

E213

Sacramento green is a vibrant and lively shade of green that is often associated with the lush landscapes and foliage found in the Sacramento region of California. It embodies a fresh and invigorating quality, resembling the color of vibrant, healthy vegetation or the leaves of certain plants. This color can be described as a medium to dark green with a noticeable brightness and richness. Sacramento green can bring a refreshing and energetic atmosphere to a space. It can create a striking contrast when combined with neutrals like white or grey.

@BURGUNDY_BROWNISH

E216

Burgundy brownish is a warm, rich, and intense color that marries the deep, dark red hues of burgundy wine with a touch of earthy brown. The result is a rustic, dark shade of reddish-brown that embodies a sense of depth, warmth, and sophistication. In terms of flooring, a burgundy brownish epoxy flake coating can create a warm, inviting, and sophisticated surface. The deep, rich color can also help conceal dirt or wear, making it a practical choice for high-traffic areas.

SWIPE UP

@CARMEL_BROWN

E217

Caramel brown is a warm, rich, and inviting color named after the sweet substance it resembles. It has a golden undertone and is often associated with the color of caramel candy or caramel sauce - a deep, rich blend of yellow, orange and brown hues. When used in something like an epoxy flake coating, a caramel brown color can add a warm, inviting, and slightly rustic feel to a space. This mid-tone color is likely to hide dirt and blemishes fairly well, serving both aesthetic and functional purposes. Always remember to check samples of the color under the lighting conditions of the space you intend to use it in, as different lighting can significantly affect the appearance of color.

@TAWNY_BROWN

E218

Tawny brown is a warm, medium shade of brown that carries a hint of orange-red. Its name originates from the word 'tawny' which is often used to describe the color of lion's fur, toasted grains, or a variety of tawny port wine. Tawny brown can bring an earthy, warm, and reassuring presence to the space. Its medium tone offers a practical advantage as well, as it would likely hide dirt and wear fairly well. As always, remember that the actual color might vary depending on the specific mix and lighting circumstances, so seek to view a sample in its intended environment for a truly accurate representation.

SWIPE UP

@CHILI_RED

E219

Chili red is a vibrant, spicy, and intense shade of red that takes its name from the rich color of chili peppers. It's an exciting and stimulating color, leaning slightly more towards the warmer side due to its vivid orange undertones. chili red could create a lively and striking surface. However, keep in mind that such a bold shade might show scratches or wear more than a neutral or darker color. Consider your space, lighting, and environment when deciding if it's the right choice for your project.
